

```
import java.util.Scanner;

public class Main
{
    public static void main(String[] args) {
        int i=0;
Scanner myobj=new Scanner(System.in);

        System.out.println("enter number of elements");
        int n=myobj.nextInt();
        int[] a=new int[n];

        System.out.println("enter anyway elements");
        for(i=0;i<n;i++)
        {
            a[i]=myobj.nextInt();
        }
        System.out.println("array elements are:");
        for(i=0;i<n;i++)
        {
            System.out.println(a[i]);
        }
    }
}
```
